

Which NAUTIC-ON installation path is right for my boat?

The standard NAUTIC-ON system monitors boat location, battery, bilge and engine data. Answer these questions about your boat configuration so we can recommend the best installation path.

1. Does your boat have a Mercury engine?

Mercury engines are often black with this logo.

2. For Non-Mercury engines: Does your boat have NMEA 2000 / Digital switching capabilities?

If you are able to control on-boat features, e.g., air conditioning, stereo, security systems, using one or more digital displays on your helm, then you have digital switching.

An example of a digital display

3. For Mercury engines: Does your boat have a SmartCraft junction box?

If you have a SmartCraft junction box, it should be located within a few feet of your gauges and shifters on the helm of your boat.

Have a Mercury engine, but still not sure?

Look at the gauges on your helm. If your gauges are analog you likely do NOT have a SmartCraft junction box. If you have digital gauges, you should have a SmartCraft junction box.

Analog gauges = NO

Digital gauges = YES

No SmartCraft junction box?

You will need alternative cables to hook up the NAUTIC-ON system. Please give us a call and we will ship those to you.

Recommended Installation Path

	Location	Battery	Bilge	Engine
A Non-Mercury engine with NMEA 2000 / Digital switching <i>Please call us for alternative cable</i>	✓	✓	✓	✓
B Non-Mercury engine without NMEA 2000 / Digital switching <i>Please call us for alternative cable</i>	✓	✓	✓	
C Mercury engine with SmartCraft junction box	✓	✓	✓	✓
D Mercury engine without SmartCraft junction box <i>Please call us for alternative cable</i>	✓	✓	✓	✓
